

Island Bay, Beaufort Sea in 2008 may result, at worst, in a temporary modification in behavior (Level B Harassment) of small numbers of six species of marine mammals, will have no more than a negligible impact on the affected species or stocks, and that there will not be any unmitigable adverse impacts to subsistence communities, provided the mitigation measures described above are implemented.

NMFS has preliminarily determined that the short-term impact of conducting seismic surveys in the Liberty Prospect area of the U.S. Beaufort Sea may result, at worst, in a temporary modification in behavior by certain species of marine mammals. While behavioral and avoidance reactions may be made by these species in response to the resultant noise, this behavioral change is expected to have a negligible impact on the animals. While the number of potential incidental harassment takes will depend on the distribution and abundance of marine mammals (which vary annually due to variable ice conditions and other factors) in the area of seismic operations, the number of potential harassment takings is estimated to be small (less than one percent of any of the estimated population sizes) and has been mitigated to the lowest level practicable through incorporation of the measures mentioned previously in this document. In addition, no take by death and/or serious injury is anticipated, and the potential for temporary or permanent hearing impairment will be avoided through the incorporation of the mitigation and monitoring measures proposed above. No rookeries, mating grounds, areas of concentrated feeding, or other areas of special significance for marine mammals occur within or near the planned area of operations during the season of operations.

NMFS has preliminarily determined that the proposed seismic activity by BPXA in the Beaufort Sea in 2008 will not have an unmitigable adverse impact on the subsistence uses of bowhead whales and other marine mammals. This determination is supported by the information in this **Federal Register** Notice, including: (1) the fall bowhead whale hunt in the Beaufort Sea will either be governed by a CAA between BPXA and the AEWC and village whaling captains or by mitigation measures contained in the IHA; (2) the CAA or IHA conditions will significantly reduce impacts on subsistence hunters to ensure that there will not be an unmitigable adverse impact on subsistence uses of marine mammals; (3) because ringed seals are hunted mainly from October through

June, although they are available year-round; however, the seismic survey will not occur during the primary period when these seals are typically harvested; (4) the main seal hunts that occur during the open water season occur in areas farther west than the Liberty Prospect, so it should not conflict with harvest activities; and (5) specific provisions to avoid interference with the seal hunts will be integrated into the survey in compliance with the CAA where applicable.

Proposed Authorization

As a result of these preliminary determinations, NMFS proposes to issue an IHA to BPXA for conducting a seismic survey in the Liberty Prospect, Foggy Island Bay, Beaufort Sea in 2008, provided the previously mentioned mitigation, monitoring, and reporting requirements are incorporated.
