The Corps of Engineers is required by three federal laws, passed by Congress, to regulate construction-related activities in waters of the United States. This is accomplished through the review of applications for permits to do this work. There are five types of permits that may be used. The ENG 4345 form used for standard permit applications has been in use since the 1970s and the request to extend the expiration date is being provided in this notice. In addition, the Corps is now proposing a form specific to their nationwide permit program. Nationwide Permits (NWP) are one type of permit authorization that involves a streamlined review process to ensure that no more than minimal individual or cumulative adverse environmental effect result from construction of the proposed activity. NWPs authorize

discharges of dredged or fill material into waters of the United States pursuant to Section 404 of the Clean Water Act and structures or work in navigable waters under Section 10 of the Rivers and Harbors Act of 1899. This form is optional, but allows the Corps to collect the information needed to evaluate the applicants' proposal to determine eligibility for authorization. The Corps will provide outreach materials to guide the public in which of the forms should be used and how using the form and providing the information requested can reduce the time it takes to review whether an application is complete.
