

Minerals, LLC (Prince) in Leesburg, Alabama meet the applicability criteria of NESHAP subparts BBBB BBBB, CCCCCC, and/or VVVVVV?

A: Based on the information provided, EPA determines that Prince's frit production processes meet the applicability criteria of subpart CCCCCC and do not meet the applicability criteria for subparts BBBB BBBB and VVVVVV. Subpart CCCCCC is applicable to Prince's facility because the subpart lists NAICS code 3255 and defines "paints and allied products manufacturing" as the production of paints and allied products (e.g., coatings) intended to "leave a dried film of solid material on a substrate," and the subpart defines "material containing HAP" as including any material containing nickel in amounts greater than 0.1 percent by weight. Subpart BBBB BBBB defines "chemical preparation" as being manufactured in a process described by the NAICS code 325998, so subpart BBBB BBBB is not applicable. Subpart VVVVVV includes an applicability exclusion for sources subject to Subpart CCCCCC, so subpart VVVVVV is not applicable.

Abstract for [Z200005]

Q: Does EPA approve an alternative monitoring plan (AMP) for six reciprocating internal combustion engines (RICEs) operating at less than 100 percent maximum load during compliance testing at Kinder Morgan Natural Gas Pipeline's Houston Central Gas Plant in Sheridan, Texas subject to NESHAP subpart ZZZZ?

A: Yes. Based on the information provided, EPA conditionally approves an AMP to conduct performance testing for engines COMP-1, COMP-35, and COMP-13C at a maximum engine load of 85 percent with subsequent monitoring required at 85 percent plus or minus 10 percent load, and for engines COMP-349, COMP-350, and COMP-8 at a maximum engine load of 90 percent with subsequent monitoring required at 90 percent plus or minus 10 percent load. EPA agrees that these six RICEs cannot operate at 100 percent plus or minus 10 percent operational load during compliance testing as specified in 40 CFR 63.6620(b)(2) due to site-specific operations. If operations change such that the maximum load of the engines exceeds these alternative lower maximum loads, the AMP will become null and void and retesting at the higher engine load will be required

to demonstrate compliance with subpart ZZZZ.

John Dombrowski,

Deputy Director, Office of Compliance, Office of Enforcement and Compliance Assurance.
