POLICY JUSTIFICATION

Egypt—UGM–84L Harpoon Block II Encapsulated Missiles

The Government of Egypt has requested a possible sale of:

Major Defense Equipment (MDE)

includes:

Twenty (20) UGM–84L Harpoon Block II Encapsulated Missiles
Two (2) Encapsulated Harpoon Certification Training Vehicles (EHCTV)

Non-MDE items also included are containers, spare and repair parts, support and test equipment, publications and technical documentation, personnel training and training equipment, U.S. Government and contractor representative technical

assistance, engineering and logistics support services, and other related elements of logistics support.

This proposed sale will contribute to the foreign policy and national security of the United States by helping to improve the security of a strategic partner that has been and continues to be an important force for political stability and economic progress in the Middle East.

The proposed sale of these submarine-launched missiles will support the Egyptian Navy's Type 209 submarines, increasing its anti-surface warfare and maritime security capabilities. Egypt already possesses Harpoon Block II missiles and will have no difficulty absorbing these additional weapons.

The proposed sale of this equipment and support will not alter the basic military balance in the region.

The prime contractor will be The Boeing Company in St. Louis, Missouri. There are no known offset agreements proposed in connection with this potential sale.

Implementation of this proposed sale will require annual trips to Egypt involving U.S. Government and contractor representatives for technical reviews, support, and oversight for approximately five years.

There will be no adverse impact on United States defense readiness as a result of this proposed sale.

Transmittal No. 15–70

Notice of Proposed Issuance of Letter of Offer Pursuant to Section 36(b)(1) of the Arms Export Control Act

Annex Item

No. vii

(vii) *Sensitivity of Technology*:

1. The UGM–84L Harpoon Block II Encapsulated missile system is classified CONFIDENTIAL. The Harpoon missile is a conventional tactical weapon system currently in service in the U.S. Navy and in 29 other foreign nations. It provides day, night, and adverse weather, stand-off capability and is an effective Anti-Surface Warfare missile. The UGM–84L incorporates components, software, and technical design information that are considered sensitive. The following components of the proposed sale are classified CONFIDENTIAL:

- The Radar Seeker
- The Global Positioning System/Inertial Navigation System (GPS/INS)
- Operational Flight Program Software
- Missile operational characteristics and performance data

These elements are essential to the ability of the Harpoon missile to

selectively engage hostile targets under a wide range of operations, tactical, and environmental conditions.

2. If a technologically advanced adversary were to obtain knowledge of the specific hardware and software elements, the information could be used to develop countermeasures which might reduce weapon system effectiveness or be used in the development of a system with similar or advanced capabilities. All defense articles and services listed in this transmittal have been authorized for release and export to Egypt.
