

should receive a higher level of review. Moreover, all forms of antibiotic resistance occur naturally and the use of antibiotics creates selective pressure for resistant strains. The additional text recognizes that a drug may remain useful for control of a disease despite some percentage of the population of microorganisms having developed resistance. It is also intended to clarify that even if a particular drug is not considered the "drug of choice" to treat a disease, elimination of such a drug as a treatment option may still raise important clinical and public health considerations for certain subpopulations.

Once a Section III-A-I-a experiment is reviewed by the RAC and approved by the NIH Director, equivalent experiments may not need to follow the same approval process to determine the appropriate biosafety containment level for the work. A new section under III-B (Experiments that Require NIH/OBA and IBC Approval before Initiation) is proposed to be added to allow NIH/OBA the discretion to review and approve certain experiments if NIH/OBA determines that an equivalent experiment has already been approved by the NIH Director and there are no substantial changes to the proposed experiment or new information that would raise new biosafety or public health issues. Under this proposal, Investigators will be notified by NIH/OBA if such a determination has been made.

The following addition is proposed to be added to Section III-B of the *NIH Guidelines* to allow NIH/OBA the discretion to review and approve certain experiments that have been previously reviewed by the RAC and approved by the NIH Director as a Major Action.

"Section III-B-2, *Experiments that have been approved (under Section III-A-1-a) as Major Actions under the NIH Guidelines*

Upon receipt and review of an application from the investigator, NIH/OBA may determine that a proposed experiment is equivalent to an experiment that has previously been approved by the NIH Director as a Major Action, including experiments approved prior to implementation of these changes. An experiment will only be considered equivalent if, as determined by NIH/OBA, there are no substantive differences in experimental design or pertinent information has not emerged since submission of the initial III-A-1 experiment that would impact on the biosafety or public health risks for the proposed experiments. If such a determination is made by NIH/OBA, these experiments will not require

review and approval under Section III-A."
