

CFR part 404. Applications will be evaluated utilizing the following criteria: (1) Ability to manufacture and market the technology; (2) manufacturing and marketing ability; (3) time required to bring technology to market and production rate; (4) royalties; (5) technical capabilities; and (6) small business status.

Serial No. 94/39011 entitled "A Recombinant Polypeptide For Use in the Manufacture of Vaccines Against Campylobacter-induced Diarrhea and to Reduce Colonization" by Lee, Guerry, Berg and Trust filed 15 July 1997. This technology represents an effective vaccine and treatment against Campylobacter diarrhea and comprises a recombinant fusion protein of the maltose binding protein (MBP) of E.coli fused to amino acids 5–337 of the FlaA flagellin of Campylobacter coli VC167. This fusion protein has provided evidence of immunogenicity and protective efficacy against challenge by a heterologous strain of Campylobacter jejuni 81–176 in mammals. The technology avoids the technical problem of inducing the autoimmune Guillain Barre Syndrome (GBS), a post-infection polyneuropathy caused by Campylobacter molecular mimicry of human gangliosides. The technology includes a recombinant DNA construct encoding the immunodominant region of flagellin conserved across the Campylobacter species; expression—systems; methods for inducing an immune response through injectable, intranasal, and oral formulations; and a method for reducing Campylobacter intestinal colonization.

DATES: Applications for an exclusive or partially exclusive license may be submitted at any time from the date of this notice.

DEPARTMENT OF ENERGY

National Energy Technology Laboratory; Notice of Financial Assistance Solicitation

AGENCY: National Energy Technology Laboratory, Department of Energy (DOE).

ACTION: Notice.

SUMMARY: Notice is hereby given of the intent to issue Financial Assistance Solicitation No. DE–PS26–00NT40779 entitled "Hybrid Power Systems." The goal of this procurement is to aid the development of systems that will produce affordable, safe, environmentally-friendly electrical power with a goal of eventually being 70+ percent efficient (lower heating value) from fossil fuels. The work will focus on proof-of-concept systems of suppliers' market entry product. The system shall contain any combination of existing or "near-term" power industry fuel-to-electricity conversion equipment. One of these components must be a high-temperature fuel cell.

DATES: The solicitation will be available on the DOE/NETL's Internet address at
