

and improved, the overall increase in impervious surface area upon completion of the Proposed Action would be minor.

Under the No Action Alternative, DLA would not construct the GPW or IT Center. Modern facilities would not be provided and operational conditions would not be improved. In general, implementation of the No Action Alternative would require that DLA continue to operate under substandard, inefficient, and in some cases, unsafe conditions. These deficiencies would impair DLA's future ability to sustain current and future national security objectives and other mission requirements successfully. The No Action Alternative would not meet the purpose of and need for the action.

Potential Environmental Impacts: Potential impacts from the Proposed Action and No Action Alternative were analyzed for the following environmental resources: Land use, noise, air quality, geological resources, water resources, biological resources, health and safety, utilities and infrastructure (including transportation), hazardous materials and wastes, socioeconomic resources and environmental justice, and cultural resources. Long-term, adverse impacts on geology, soils and water resources would be expected from a long-term increase in storm water runoff volume and velocity due to an increase in impervious surface area. However, impacts would be minor because the majority of the project areas are either currently paved or previously disturbed. Once construction of the GPW and IT Center is completed, there would be a long-term increase in demand for water, wastewater treatment, electricity and natural gas. No significant impacts on any of the aforementioned environmental resources would be expected from the implementation of the Proposed Action.

Determination: DLA has determined that implementation of the Proposed Action will not have a significant effect on the human environment. Human environment was interpreted comprehensively to include the natural and physical environment and the relationship of people with that environment. Specifically, no highly uncertain or controversial impacts, unique or unknown risk or cumulatively significant effects were identified. Implementation of the Proposed Action will not violate any federal, state or local laws. Based on the results of the analyses performed during the preparation of the environmental assessment, David Rodriguez, Director, DLA Installation Support, concludes

that construction of the GPW/IT project does not constitute a major federal action significantly affecting the quality of the human environment within the context of NEPA. Therefore, an environmental impact statement for the proposed action is not required.
