SUPPLEMENTARY INFORMATION:

General Information

EPA proposes to create a new system of records under the Privacy Act to enhance the Agency's communication and collaboration environment. EPA is implementing My Workplace, utilizing Microsoft Office 365 and SharePoint Online, to deliver a cost effective, user-friendly, agency-wide collaboration solution that will help transform the way employees work at EPA. My Workplace will enhance productivity by making it easier for the Agency's multi-disciplinary, geographically dispersed workforce stay better informed by facilitating communication, coordination, collaboration and innovation, thus allowing EPA to deliver better on its mission of protecting human health and the environment.

The My Workplace collaboration tool will contain information about

employees obtained from other Agency systems (e.g., name, user id, work phone number) or voluntarily provided by the users (e.g., home phone number, home address). The system will contain employees' names, user identification numbers, telephone numbers, office numbers and locations, organizational information, skill sets, education and experience. This information will be used to foster communication and enhance the ability of employees to locate individuals with relevant experience and skill sets.

EPA plans to use a feature of the system that consists of personalized profiles for each employee as an Agency directory to help connect subject matter experts to Agency projects. The profiles will include work-related information (office location, office phone number) as well as optional information voluntarily provided by the employee such as work experience and educational history or photographs. The use of the profile will improve information sharing and collaboration among colleagues and make it easier for EPA staff to locate the knowledge skills and abilities required for Agency projects and initiatives.

My Workplace will use Lync, an instant messaging and video conferencing tool, to promote discussion and communication through instant messaging and online meetings. Lync will include the information contained in the personalized profiles and will temporarily display additional information about a user's presence or status, based on the user's online activity, (e.g., "user has been away for 20 minutes"). This feature is active by default, but users may disable it. Users will also have the option of posting a personalized status message for other users to see on their profile. The information for both Lync and the personalized profiles will be stored in Microsoft's Shared Government Cloud and will be accessible by users of the system. Initial profile information will be populated using EPA's existing directory information; however, users will have the ability to update and manage their profiles.

My Workplace will allow users to establish team collaboration workspaces; facilitate sharing of documents, policies and information; and network through the SharePoint features. The SharePoint environment will include Agency policies, procedures, forms, organization charts, links to other sites that are helpful for users, and links to other EPA SharePoint sites containing shared documents and other information. Sharepoint will include content on program and regional offices, services and support,

and projects and activities. My Workplace will include a directory of all users, including contact information, titles and professional business information. Users will be able to set up a personal profile, upload pictures, and publish content and messages that are similar to email. My Workplace will also allow employees to join groups, connect with colleagues, receive newsfeeds when new information is posted, and identify colleagues with specialized knowledge and/or expertise to participate in collaborative efforts. Employees will also be able to use their profiles to apply to participate on virtual collaboration projects and teams.

The system will be managed and maintained by EPA's Office of Environmental Information.
