SUPPLEMENTARY INFORMATION: The standard review plan (SRP) for the review of a license application for a fuel cycle facility (NUREG-1520) provides NRC staff guidance for reviewing and evaluating the safety, health, and environmental protection aspects of applications for licenses to possess and use SNM to produce nuclear reactor fuel. The licensing guidance revision is also intended to provide information needed to better risk-inform the preoperational readiness reviews. Specifically, items or features or aspects of the design identified during the licensing review as important, will be highlighted to verify compliance with specific commitments during the preoperational readiness reviews.

The SRP has been updated to improve and enhance the guidance by providing increased clarity and definition in specific areas of the licensing program and adding additional guidance in areas where information was lacking or not suitably addressed. This effort was focused on improving both the clarity, and also consistency, of the SRP, with the Agency positions that support compliance with current regulations. In addition, this revision has been reformatted and reorganized to improve the consistency within the document.

Dated at Rockville, MD, this 28th day of July 2009.

For the Nuclear Regulatory Commission.

Michael Tschiltz,

Deputy Director, Fuel Facility Licensing Directorate, Division of Fuel Cycle Safety and Safeguards, Office of Nuclear Material Safety and Safeguards.
