It will also provide a fuller account of the levels, durations, and spectral characteristics of the impact and vibratory pile driving sounds. For the impact pile driving, the peak, rms, and energy levels of the sound pulses and their durations will be reported as a function of distance, water depth, and tidal cycle.

In addition to the 90-day reports, KABATA proposes to submit a draft technical summary report to NMFS 60–120 days before the LOA expires. All technical reports will provide full documentation of methods, results and interpretation of all monitoring tasks. The draft final report may be subject to a review process determined by NMFS, and will then be finalized if comments are received from NMFS. The final comprehensive report will be submitted within 90 days following expiration of the final LOA.

Request for Information

As this document is being published in conformance with NMFS regulations implementing the incidental take program (50 CFR Part 216 Subpart I), NMFS requests interested persons to submit comments, information, and suggestions concerning the request and the possible structure and content of the regulations to allow the taking. As provided by 50 CFR 216.105, NMFS will consider this information in developing any proposed regulations to authorize the taking. Comments regarding activities that do not relate to the incidental taking of marine mammals will not be considered by NMFS in its decision-making process. Prior to submitting comments, NMFS recommends reviewers of this document read KABATA's MMPA application as that document contains information necessary to respond appropriately to this action. If NMFS proposes regulations to allow this take, interested parties will be provided with a 30-day comment period within which to submit comments on the proposed rule.
