

Train Control Systems, Devices, and Appliances. FRA assigned the petition Docket Number FRA–2014–0101.

Specifically, SMART seeks temporary relief from the requirements of 49 CFR 236.0—*Applicability, minimum requirements, and penalties*.

SMART proposes to perform acceptance testing of new diesel multiple units (DMUs) at speeds of up to 79 miles per hour (MPH) on trackage without a block signal system, as required in 49 CFR 236.0(c)(2).

SMART is scheduled to receive its pilot two-car set of DMUs in February 2015. However, SMART's Enhanced Automatic Train Control (E–ATC) system is not scheduled to be commissioned until 2016. SMART seeks permission to perform limited nonrevenue testing of its new fleet of DMUs at a speed not to exceed 79 mph, solely on a remote 6.3-mile segment of track, absent the installation of a block signal system. SMART is seeking to perform testing under this temporary waiver until its E–ATC system is fully commissioned.

SMART has submitted a test plan with its petition that outlines the safety procedures that are to be in place during the testing.
