

Mitigation

Mitigation is included in the Final EIS for Cultural Resources, Water Resources, and Wildlife Resources. Mitigation for cultural resources was developed for potential effects to 20 National Register of Historic Places eligible historic properties and includes development of a Historic Properties Treatment Plan and Memorandum of Availability. Mitigation for Water Resources was developed for surface disturbance, fencing, and potential groundwater drawdown effects to spring sites and includes monitoring for triggers, and different mitigation types to reduce effects. Mitigation for wildlife was developed for potential effects to desert kangaroo rats, greater sage-grouse, and burrowing owls, and includes flushing burrows, use of the State of Nevada Conservation Credit System, and installation of artificial burrows.

Based on the analyses contained in the Final EIS for the proposed Project, and after carefully considering input received from the public and cooperating agencies, the BLM has selected the Proposed Action as the BLM's preferred alternative and the No Action Alternative as the environmentally preferred alternative.

Comments on the Draft EIS received from the public and internal BLM review were considered and incorporated as appropriate into the Final EIS. Public comments resulted in the addition of clarifying text, but did not significantly change proposed decisions.
