NUCLEAR REGULATORY COMMISSION

[Docket No. 50-336]

Millstone Power Station, Unit No. 2; Notice of Consideration of Issuance of Amendment to Facility Operating License, Proposed No Significant Hazards Consideration Determination and Opportunity for a Hearing

The U.S. Nuclear Regulatory Commission (the Commission or NRC) is considering issuance of an amendment to Facility Operating License No. DPR-65 issued to Dominion Nuclear Connecticut (the licensee) for operation of the Millstone Power Station, Unit No. 2, located in New London County, Connecticut.

The proposed amendment would revise Technical Specification (TS) 3/4.4.3, "Reactor Coolant System, Relief Valves" to modify the method of testing the pressurizer Power Operated Relief Valves (PORVs). Specifically, the requirement for bench testing the valves is changed to accommodate testing of the PORVs while installed in the plant. The change is requested due to the installation of new PORVs that are welded to the piping rather than bolted into the system.

Before issuance of the proposed license amendment, the Commission will have made findings required by the Atomic Energy Act of 1954, as amended (the Act), and the Commission's regulations.

The Commission has made a proposed determination that the amendment request involves no significant hazards consideration. Under the Commission's regulations in Title 10
