Proposed Project

Cause-Specific Absenteeism in Schools and Evaluation of Influenza Transmission within Student Households (OMB Control No. 0920-1039, Exp. 3/31/2021)—Reinstatement with Change—National Center for Emerging and Zoonotic Infectious Diseases (NCEZID), Centers for Disease Control and Prevention (CDC).

Background and Brief Description

This information collection aims to improve our understanding of the role of influenza-like illness (ILI)-specific absenteeism in schools in predicting community-wide influenza transmission and to detect within-household transmission of influenza in households from which a student has been absent from school due to ILI. Insights gained from this information collection will be

used to strengthen the evidence-base of CDC's Pre-Pandemic Guidance prior to the next pandemic.

School children are frequently the main introducers of influenza to their families. Evaluating influenza transmission within households where students are absent from school because

of ILI may serve as an additional layer of influenza surveillance and could contribute to understanding of influenza transmission dynamics within the surrounding community. This aims to enhance current knowledge and understanding around the introduction of influenza infection to households that

have school-age children, as well as within-household influenza transmission.

CDC requests a three-year approval for this Reinstatement. Estimated annualized burden hours requested for this collection are 449. There is no cost to respondents other than their time.
