**SUPPLEMENTARY INFORMATION:**

The AJBRF was operated by the Omaha VAMC to support nuclear medicine and research programs conducted at the Omaha VAMC medical center. Between 1959 and 1965, the facility was funded as a national laboratory and employed approximately 30 people. The AJBRF was primarily used for neutron activation of biological samples, but was also used for training Fort Calhoun Station nuclear power reactor operators.

By letters dated September 21, 2004, August 15, 2011, March 8, 2012, May 21, 2014, and November 12, 2014, (ADAMS Accession Nos. ML042740512, ML11255A334, ML12075A202, ML14150A404, and ML14335A597, respectively), Omaha VAMC submitted to the NRC an application for amendment of Facility Operating License No. R-57 for AJBRF. The application requested NRC approval of the AJBRF DP.

Pursuant to § 50.82(b)(5) of Title 10 of the *Code of Federal Regulations* (10 CFR), the AJBRF DP was noticed in the **Federal Register** on June 20, 2012 (77 FR 37074). The **Federal Register** notice provided opportunity for the public to provide comments, request a hearing, and petition for leave to intervene. No comments or other responses were received. The proposed DP contains additional information but has not changed substantially since the DP was noticed in 2012; therefore, a new notice was not required. Specifically, the release criteria were updated to refer to Inspection and Enforcement Circular 81-07.

Pursuant to 10 CFR 50.82(b)(5), the NRC staff has concluded that the proposed AJBRF demonstrates that the decommissioning will be performed in accordance with the regulations of 10 CFR part 50 and will not be inimical to the common defense and security or to the health and safety of the public. The NRC staff's conclusions have been documented in a Safety Evaluation Report (ADAMS Accession No. ML14318A906). Therefore, the NRC has approved the AJBRF DP by amending Facility Operating License No. R-57.

Dated at Rockville, Maryland, this 8th day of January 2015.
