Such data uses require more rigorous designs that address: the target population to which generalizations will be made, the sampling frame, the sample design (including stratification and clustering), the precision requirements or power calculations that justify the proposed sample size, the expected response rate, methods for assessing potential non-response bias, the protocols for data collection, and any testing procedures that were or will be undertaken prior fielding the study. Depending on the degree of influence the results are likely to have, such collections may still be eligible for submission for other generic mechanisms that are designed to yield quantitative results.

Current Actions: Extension of a previous information collection for DoD's Interactive Customer Evaluation (ICE) system.

Type of Review: Extension.

Affected Public: Individuals or Households, Businesses or Other For-Profit.
