

Because emissions of NO_x, Hg and SO₂ from power plants are capped by clean air legislation, physical emissions from electricity generation will be only minimally affected by distribution transformers energy conservation standards. The maximum NO_x, Hg and SO₂ allowed by law will most likely still be produced, but because these emissions are traded, and if emissions are lowered due to the reduction in power generation, then the cost of emission credits may decrease slightly. Therefore, the EA did not consider changes in power sector emissions because they will be negligible.

Determination: Based upon the EA, DOE has determined that the adoption of the final rule energy conservation standard for distribution transformers would not constitute a major Federal action significantly affecting the quality of the human environment, within the meaning of NEPA. Therefore, an EIS is not required, and the Department is issuing this FONSI.

Issued in Washington, DC, on November 1, 2007.

Alexander A. Karsner,

Assistant Secretary, Energy Efficiency and Renewable Energy.
