

Border Protection (CBP) to suspend liquidation of entries of subject merchandise as described in the scope of the investigation section entered, or withdrawn from warehouse, for consumption on or after the date of publication of this notice in the **Federal Register**.

If the U.S. International Trade Commission (ITC) issues a final affirmative injury determination, we will issue a CVD order, will continue the suspension of liquidation under section 706(a) of the Act, and will require a cash deposit of estimated countervailing duties for such entries of subject merchandise in the amounts indicated above. If the ITC determines that material injury, or threat of material injury, does not exist, this proceeding will be terminated and all estimated duties deposited or securities posted as a result of the suspension of liquidation will be refunded or canceled.

International Trade Commission Notification

In accordance with section 705(d) of the Act, Commerce will notify the ITC of its determination. In addition, we are making available to the ITC all non-privileged and non-proprietary information related to this investigation. We will allow the ITC access to all privileged and business proprietary information in our files, provided the ITC confirms that it will not disclose such information, either publicly or under an administrative protective order (APO), without the written consent of the Assistant Secretary for Enforcement and Compliance.

Notification Regarding Administrative Protective Orders

In the event that the ITC issues a final negative injury determination, this notice will serve as the only reminder to parties subject to an APO of their responsibility concerning the destruction of proprietary information disclosed under APO in accordance with 19 CFR 351.305(a)(3). Timely written notification of the return/destruction of APO materials or conversion to judicial protective order is hereby requested. Failure to comply with the regulations and terms of an APO is a violation which is subject to sanction.

This determination is issued and published pursuant to sections 705(d) and 777(i) of the Act and 19 CFR 351.210(c).

Dated: April 4, 2018.

Gary Taverman,

Deputy Assistant Secretary for Antidumping and Countervailing Duty Operations, performing the non-exclusive functions and duties of the Assistant Secretary for Enforcement and Compliance.

Appendix—Scope of the Investigation

The products covered by this investigation are certain forged stainless steel flanges, whether unfinished, semi-finished, or finished (certain forged stainless steel flanges). Certain forged stainless steel flanges are generally manufactured to, but not limited to, the material specification of ASTM/ASME A/SA182 or comparable domestic or foreign specifications. Certain forged stainless steel flanges are made in various grades such as, but not limited to, 304, 304L, 316, and 316L (or combinations thereof). The term “stainless steel” used in this scope refers to an alloy steel containing, by actual weight, 1.2 percent or less of carbon and 10.5 percent or more of chromium, with or without other elements.

Unfinished stainless steel flanges possess the approximate shape of finished stainless steel flanges and have not yet been machined to final specification after the initial forging or like operations. These machining processes may include, but are not limited to, boring, facing, spot facing, drilling, tapering, threading, beveling, heating, or compressing. Semi-finished stainless steel flanges are unfinished stainless steel flanges that have undergone some machining processes.

The scope includes six general types of flanges. They are: (1) Weld neck, generally used in butt-weld line connection; (2) threaded, generally used for threaded line connections; (3) slip-on, generally used to slide over pipe; (4) lap joint, generally used with stub-ends/butt-weld line connections; (5) socket weld, generally used to fit pipe into a machine recession; and (6) blind, generally used to seal off a line. The sizes and descriptions of the flanges within the scope include all pressure classes of ASME B16.5 and range from one-half inch to twenty-four inches nominal pipe size. Specifically excluded from the scope of these orders are cast stainless steel flanges. Cast stainless steel flanges generally are manufactured to specification ASTM A351.

The country of origin for certain forged stainless steel flanges, whether unfinished, semi-finished, or finished is the country where the flange was forged. Subject merchandise includes stainless steel flanges as defined above that have been further processed in a third country. The processing includes, but is not limited to, boring, facing, spot facing, drilling, tapering, threading, beveling, heating, or compressing, and/or any other processing that would not otherwise remove the merchandise from the scope of the investigations if performed in the country of manufacture of the stainless steel flanges.

Merchandise subject to the investigation is typically imported under headings 7307.21.1000 and 7307.21.5000 of the Harmonized Tariff Schedule of the United States (HTSUS). While HTSUS subheadings and ASTM specifications are provided for convenience and customs purposes, the

written description of the scope is dispositive.

BILLING CODE 3510-DS-P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

RIN 0648–XG142

Magnuson-Stevens Act Provisions; General Provisions for Domestic Fisheries; Application for Exempted Fishing Permits

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice; request for comments.

SUMMARY: The Assistant Regional Administrator for Sustainable Fisheries, Greater Atlantic Region, NMFS (Assistant Regional Administrator), has made a preliminary determination that three exempted fishing permit applications contain all of the required information and warrant further consideration. These exempted fishing permits would authorize five commercial fishing vessels to test the economic viability of using hook gear to selectively target pollock and haddock in the Western Gulf of Maine and Cashes Ledge Closure Areas (excluding the Cashes Ledge Habitat Management Area), and to temporarily retain undersized catch for measurement and data collection.

Regulations under the Magnuson-Stevens Fishery Conservation and Management Act require publication of this notification to provide interested parties the opportunity to comment on applications for proposed exempted fishing permits.

DATES: Comments must be received on or before April 27, 2018.

ADDRESSES: You may submit written comments by any of the following methods:

- **Email:** NMFS.GAR.EFP@noaa.gov. Include in the subject line “Comments on EFP Applications for Hook Gear Access to WGOM and Cashes Ledge Closure Areas.”

- **Mail:** Michael Pentony, Regional Administrator, NMFS, Greater Atlantic Regional Fisheries Office, 55 Great Republic Drive, Gloucester, MA 01930. Mark the outside of the envelope “Comments on EFP Applications for Hook Gear Access to WGOM and Cashes Ledge Closure Areas.”

FOR FURTHER INFORMATION CONTACT: Kyle Molton, Fishery Management Specialist, 978–281–9236, Kyle.Molton@noaa.gov.

SUPPLEMENTARY INFORMATION: Two commercial fishermen and a groundfish sector submitted complete applications to renew exempted fishing permits (EFPs) on February 16, 2018, to conduct commercial fishing activities that the regulations would otherwise restrict. These EFPs would authorize five commercial fishing vessels to fish a combined total of 150 trips in the Western Gulf of Maine (WGOM) and Cashes Ledge Closure Areas, excluding the Cashes Ledge Habitat Management Area (HMA), with hook gear, and to temporarily retain undersized catch for measurement and data collection. Within the Cashes Ledge Closure Area, access would be permitted in the Fippennies Ledge HMA, but not in the Cashes Ledge or Ammen Rock HMAs. These HMAs were developed as part of the New England Fisheries Management Council's Omnibus Essential Fish Habitat Amendment 2, and approved by NMFS on January 3, 2018.

The EFPs would authorize the applicants to use hook gear to selectively target pollock and haddock while maintaining minimal bycatch. In addition, the applicants would also explore and develop premium markets to increase the value of the catch. This study would be conducted in the WGOM and Cashes Ledge Closure Areas. The applicants have requested access to these areas based on reports, and experimental fishing, which suggest that there are high concentrations of the target species located in these areas. The exemptions are necessary to conduct this study because vessels on commercial groundfish trips are prohibited from fishing for groundfish in these closed areas and from retaining undersized groundfish. EFP trips would occur year-round, excluding existing seasonal closures.

Participating vessels would take a combined total of 150 trips to closed areas. Trips would be roughly 24 hours or less in length. Vessels would use automated jigging machines, handline, and rod and reel gears only. Based on preliminary 2017 data, estimated catch on these trips is between 1,000 and 2,000 lb (453.5 to 907.2 kg) of pollock and haddock, combined, per trip. 2017 data indicate that catch of non-target species is small; cod represented less than 10 percent of catch overall, and other species were encountered only sporadically or in low numbers.

Because these vessels would be fishing in closed areas, and must minimize interactions with non-target

species like cod, the use of a vessel monitoring system and 100-percent monitoring would be required for all vessels. A research technician or at-sea monitor would accompany all trips that occur under these EFPs to measure and document fish caught and document fishing gear, bait, location, and fishing conditions to evaluate gear performance. The vessel captains would also document fishing practices used to avoid bycatch of non-target species. Undersized fish would be discarded as quickly as possible after sampling. All Northeast multispecies of legal size would be landed, and all catch would be attributed to the vessel's sector annual catch entitlement. The applicants will also document ex-vessel price for all sold catch for comparison with other harvest methods and markets. The participating vessels would not be exempt from any sector monitoring or reporting requirements.

If approved, the applicants may request minor modifications and extensions to the EFPs throughout the year. EFP modifications and extensions may be granted without further notice if they are deemed essential to facilitate completion of the proposed research and have minimal impacts that do not change the scope or impact of the initially approved EFP request.

Authority: 16 U.S.C. 1801 *et seq.*

Dated: April 9, 2018.

Jennifer M. Wallace,
Acting Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

RIN 0648–XG152

Magnuson-Stevens Act Provisions; General Provisions for Domestic Fisheries; Application for Exempted Fishing Permits

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice; request for comments.

SUMMARY: The Assistant Regional Administrator for Sustainable Fisheries, Greater Atlantic Region, NMFS, has made a preliminary determination that an exempted fishing permit application submitted by the Cape Cod Commercial Fishermen's Alliance contains all of the required information and warrants

further consideration. This exempted fishing permit would require participants to use electronic monitoring systems on 100 percent of sector trips for catch accounting in the groundfish fishery. Additionally, vessels would be authorized to access portions of groundfish closed areas. Regulations under the Magnuson-Stevens Fishery Conservation and Management Act require publication of this notification to provide interested parties the opportunity to comment on applications for proposed exempted fishing permits.

DATES: Comments must be received on or before April 27, 2018.

ADDRESSES: You may submit written comments by either of the following methods:

- **Email:** nmfs.gar.efp@noaa.gov. Include in the subject line “100 PERCENT EM EFP.”

- **Mail:** Michael Pentony, Regional Administrator, NMFS, Greater Atlantic Regional Fisheries Office, 55 Great Republic Drive, Gloucester, MA 01930. Mark the outside of the envelope “100 PERCENT EM EFP.”

FOR FURTHER INFORMATION CONTACT: Claire Fitz-Gerald, Fishery Management Specialist, 978–281–9255.

SUPPLEMENTARY INFORMATION: Groundfish sectors are required to implement and fund an at-sea monitoring (ASM) program. Sectors may use electronic monitoring (EM) to satisfy this monitoring requirement, provided that NMFS deems the technology sufficient for catch monitoring. NMFS has yet to approve EM as a suitable alternative to ASM. However, NMFS is working with industry and other stakeholders to test the operational feasibility of EM and resolve outstanding barriers to implementation. Project partners include the Cape Cod Commercial Fishermen's Alliance, The Nature Conservancy, the Maine Coast Fishermen's Association, the Gulf of Maine Research Institute, and fishermen from the Northeast Fishery Sectors V & XI, the GB Cod Fixed Gear Sector, the Sustainable Harvest Sector, and the Maine Coast Community Sector.

In fishing year 2017, NMFS issued an exempted fishing permit (EFP) to these project partners to develop an audit-model EM program for the groundfish fishery. The EFP required vessels to use EM systems on 100 percent of groundfish sector trips to verify regulated groundfish discards. EM was used in lieu of human observers to meet their sector ASM requirements. Thirteen vessels using a variety of gear types (e.g. hook, benthic longline, sink gillnet, bottom trawl) participated in the
