SUPPLEMENTARY INFORMATION: DOE generates surplus and scrap material during the normal course of activities, and attempts to recycle as much as possible consistent with common industrial practice. DOE is also guided by several Executive Orders that provide direction to Federal Agencies on recycling practices to avoid unnecessary energy consumption and use of raw materials for the development of new products. Much of this material consists of scrap metal that may contain residual surface radioactivity. On July 12, 2001, DOE issued a Notice of Intent (66 FR 36562) to prepare a PEIS on the DOE policy alternatives for the disposition of scrap metals that may contain residual surface radioactivity.

As originally announced in the Notice of Intent, DOE has conducted public

scoping meetings on the PEIS in the following locations: North Augusta, South Carolina: Oak Ridge, Tennessee: Oakland, California; Richland, Washington; Cincinnati, Ohio; and, Washington, DC. The original public scoping period was to continue until September 10, 2001. However, in response to public comments and to ensure that the public has ample opportunity to provide comments, DOE is extending the public scoping period by 60 days and scheduling additional meetings as specified under DATES, above. The schedule for completion of the Draft PEIS will be delayed until March, 2002, and the Final PEIS until August, 2002. Further information on this proceeding is contained in the Notice of Intent.

Issued in Washington, DC, on August 30, 2001
