

burden on those reporters that are major traders and account for a significant portion of trade. Field economists are provided with more accurate information about the potential overlap between establishments that are both in both the IPP and the Producer Price Index in order to better coordinate visits to establishments when obtaining new items for repricing. The IPP also implemented an enhanced refinement process that provides Industry Analysts the ability to reduce the burden for a respondent when necessary and modified the second stage selection algorithm to lower the percentage of infrequently traded areas that are sampled, because they are more likely to be out-of-scope for the IPP. These improvements should reduce the overall burden on respondents and improve the IPP's overall response rate at initiation. In addition, in 2003 the IPP introduced a web application for monthly data collection. This tool allows respondents to directly update their data online via

the Internet. Web collection has expanded rapidly since the IPP began soliciting respondents and as of April 2006, the Program had solicited 70 percent of all respondents, with a goal of 75 percent by September 2006, and 95 percent by September 2007. Through April 2006, nearly 40 percent of the IPP respondents are actually utilizing web collection while the majority of respondents still use the mailout/faxback process. In addition, email repricing has the possibility of expanding, and over time, these various electronic data collection methods for repricing will continue to allow the IPP to collect and publish monthly data in a timely manner.
