

remaining attached to the cable, collected onboard the barge, and selected for further study would contribute substantially to the landings quota against which the aquarium trade species ACL is compared. As part of the permit conditions, NMFS intends to limit the amount of aquarium trade species to be retained by Clean Ocean during the proposed activities. Clean Ocean personnel will be trained and prepared to prevent damage to sensitive areas and a marine biologist will be onboard at all times to identify and report any sensitive environmental resources and to stop operations if necessary.

NMFS finds this application warrants further consideration, based on a preliminary review. In addition to the above, possible conditions the agency may impose on this permit, if it is granted, include but are not limited to, requiring Clean Ocean to submit monthly reports on the amount of coral and aquarium trade species collected, and to announce at least daily the present and following week's anticipated start and stop locations via VHF channel 16 to allow fishers time to relocate their gear and avoid trap-cable interactions.

A final decision on issuance of the EFP will depend on NMFS' review of public comments received on the application, consultations with the affected state(s), the Council, and the U.S. Coast Guard, and a determination that it is consistent with all applicable laws.
