SUPPLEMENTARY INFORMATION:

Background

The Riverside fairy shrimp is a small aquatic crustacean that occurs in vernal pools, ephemeral ponds, and human-modified depressions. Basins, ponds, and depressions that support Riverside fairy shrimp are located on coastal terraces and plateaus ranging from coastal southern California to northwestern Baja California, Mexico. Typically, this species is found in vernal pools that are deeper and cooler than those basins which support the related species, the endangered San Diego fairy shrimp (*Branchinecta sandiegonensis*).

Basins that support Riverside fairy shrimp are typically dry a portion of the year, but usually are filled by late fall, winter, or spring rains, and may persist into April or May. Critical to the formation of vernal pool basins is the presence of nearly impermeable surface or subsurface soil layers and flat or gently sloping topography. Historically, vernal pool soils and habitats covered extensive areas on the coastal plains and mesas of Los Angeles, Orange, Riverside, San Diego, and Ventura Counties. Significant losses of vernal
