**SUPPLEMENTARY INFORMATION:** The Institution Master File (IMF) System formerly maintained a file of institutions (Title I lenders and Title II mortgagees) which have been approved by HUD to participate in the Federal Housing Administration (FHA) Mortgage Insurance Programs. The principal objective of the IMF was to consolidate information on the approval status of mortgagees and lenders participating in FHA's insurance program. The Leader Electronic Assessment Portal (LEAP) has replaced IMF's role as the system of records and IMF no longer processes lender institution information. The active records for IMF were transferred to LEAP. Any records past its retention time were sent to the Records Warehouse.

**Privacy Act of 1974; System of Records**

**AGENCY:** Office of Chief Information Officer (OCIO) and Infrastructure and Operations (IOO), HUD.

**ACTION:** Notice of a new system of records.

**SUMMARY:** Pursuant to the provisions of the Privacy Act of 1974, as amended, the Department of the Housing and Urban Development (HUD), Office of Chief Information Officer (OCIO) and Infrastructure and Operations (IOO) is issuing a public notice of its intent to create a Privacy Act System of Records titled “Active Directory (a component of the Local Area Network (LAN) File Server system—LFS)”. The purpose of the LFS is to provide the infrastructure needed to support internal HUD systems locally at all HUD locations. This technology includes Active Directory. Active Directory (AD) stores information about objects on the network and makes this information easy for administrators and users to find and use. Active Directory uses a structured data store as the basis for a logical, hierarchical organization of directory information. The information in Active Directory originates from the Digital Identity and Access Management System (DIAMS).

**SUPPLEMENTARY INFORMATION:** HUD maintains the Active Directory (AD) system of records. Active Directory Domain Services (ADDS) are the foundation of every Windows domain network. It stores information about domain members, including devices and users, verifies their credentials, and defines their access rights. The server running this service is called a domain controller. A domain controller is contacted when a user logs into a device, accesses another device across the network, or runs a line-of-business Metro-style app sideloaded into a machine. Other Active Directory services and most Microsoft server technologies rely on or use Domain Services.

**SYSTEM NAME AND NUMBER:**

#### PURPOSE(S) OF THE SYSTEM:

The purpose of the LAN File Server (LFS) is to provide the infrastructure needed to support internal HUD systems locally at all HUD locations. This technology includes Active Directory. Active Directory stores information about objects on the network and makes this information easy for administrators and users to find and use. Active Directory uses a structured data store as the basis for a logical, hierarchical organization of directory information. This data store, also known as the directory, contains information about Active Directory objects. These objects typically include shared resources such as servers, volumes, printers, and the network user and computer accounts.

A. Supports the provision of user accounts and authenticates users to HUD enterprise Web applications for non-dual personal personnel with HUD's Personal Identity Verification (PIV)—Authentication (Auth) certificate.

B. Provides an Enterprise-wide hierarchical directory structure designed to employ greater centralization and standardization of network management for user data, security, and distributed resources and services across the HUD Enterprise; and

C. Synchronizes with HUD's Azure Active Directory instance for the purpose of Microsoft Azure Cloud Service collaboration, wherein HUD employees and contractors use cloud applications available in the Microsoft 365 application suite.

**SUPPLEMENTARY INFORMATION:** The Single-Family Default Monitoring System (SFDMS) is used to report mortgages 30 days or more delinquent. The Mortgagee or Servicer must submit a monthly status and/or is terminated or deleted. Under Mortgagee Letter 2021–31, published on December 30, 2021, update to FHA Catalyst Transition for Single-Family Default Monitoring System (SFDMS) Reporting Module, FHA announced that the mortgagee default reporting functionality would be transitioned to the FHA Catalyst: SFDMS Reporting Module and that February 7, 2022. Beginning March 1, 2022, Mortgagees began reporting directly through FHA Catalyst SFDMS module. The method used for retrieving records was assessed, and it was found that the system’s records are retrieved using the FHA Case Number (also known as case file number) assigned to the loan. While the system can search using the default borrowers Social Security Numbers, Property Addresses, these fields were never the primary methods of retrieval. The SFDMS system of records is being rescinded since it does not meet the legal definition. All data were handled under HUD’s Media Protection Procedures and NIST SP 800–88, Guidelines for Media Sanitization.
