

Michael Salmon, Ph.D., Florida Atlantic University, Dept. of Biological Sciences, 777 Glades Rd., Boca Raton, FL 33431; Permit No. 1509 authorizes Dr. Salmon to take ESA-listed turtles in the waters of Florida. Researchers may capture a total of 80 loggerhead (*Caretta caretta*) sea turtle hatchlings over a 2-year period. Animals will be tracked, captured by hand or dip net, have a float tether removed from their carapace, and released. A subset of these animals may also be transported to the Gulf Stream if they need help to reach it. The research will investigate whether mis-oriented turtles remain behaviorally competent when released at beach sites and are likely to complete their offshore migration, and whether they are likely to survive and contribute to population recovery.

Kenneth Lohmann, Ph.D., Department of Biology, Wilson Hall, CB#3280, University of North Carolina at Chapel Hill, Chapel Hill, NC 27599; Permit No. 1522 authorizes Dr. Lohmann to annually capture up to 120 loggerhead and 40 green (*Chelonia mydas*) sea turtle hatchlings over a 5-year period. Turtles will be tracked, captured by hand or dip net, have experimental gear removed, and be released. The research will take place in the waters off the Florida coast as part of magnetic orientation studies of hatchlings.

Dr. Lohmann will also take up to 6 adult loggerhead sea turtles annually

over five years. Animals will be tracked and have their float tether removed while at sea in waters off the coast of Florida as part of sea turtle navigation studies.

Issuance of these permits, as required by the ESA, was based on a finding that such permits (1) were applied for in good faith, (2) will not operate to the disadvantage of any endangered or threatened species, and (3) are consistent with the purposes and policies set forth in section 2 of the ESA.
