Intent To Prepare a Draft Environmental Impact Statement/ Environmental Impact Report (DEIS/ EIR) for a Permit Application for the River Road Treatment Wetlands Project in the Santa Ana River (SAR) Floodplain Upstream of the River Road Crossing, Riverside County, CA

AGENCY: U.S. Army Corps of Engineers, DoD.

ACTION: Notice of intent (NOI).

SUMMARY: In compliance with the National Environmental Policy Act (NEPA) of 1969, 40 CFR 1508.22, and 33 CFR Parts 230 and 325, and in conjunction with the Orange County Water District (OCWD), the U.S. Army

Corps of Engineers (Corps) is announcing its intent to prepare a draft Environmental Impact Statement/ Environmental Impact Report (DEIS/ EIR) for the River Road Treatment Wetlands Project (RRTWP), proposed to be located in the Santa Ana River (SAR) floodplain upstream of the River Road crossing, Riverside County, California. The project entails construction, operation, and periodic maintenance of treatment wetlands in the SAR floodplain. The SAR floodplain meets the Corps' criteria for "waters of the U.S.," and the project is subject to Corps jurisdiction under the Clean Water Act. The affected area also contains Corps-owned lands leased to the Riverside County Regional Park and Open Space District. The area has been designated critical habitat for three federal-listed species by the U.S. Fish and Wildlife Service (USFWS); as such, the Corps will comply with the requirements of Section 7 of the Federal Endangered Species Act.

FOR FURTHER INFORMATION CONTACT: Daniel Swenson, Project Manager, at (213) 452-3414 (daniel.p.swenson@usace.army.mil) or Fari Tabatabai, Project Manager at (213) 452-3291, U.S. Army Corps of Engineers, Los Angeles District, P.O. Box 532711, Los Angeles, CA 90053-2325.

SUPPLEMENTARY INFORMATION:

1. Background

The treatment wetlands are necessary because of upstream sources of water pollution. The effect of the treatment wetlands would be to reduce downstream water pollution, thereby increasing groundwater potability, aquatic habitat function, and reducing potential human health threats.

Treated wastewater and return flows from irrigated agriculture and dairies are major sources of nitrate loading into the SAR. Nitrate loads enter the river directly through waste discharges and indirectly through surface runoff and rising groundwater. High levels of nitrate are a potential human health threat that can have adverse effects on infants and pregnant women. In addition, formation of algae blooms can lower the dissolved oxygen in the water resulting in fish kills and can form a clogging layer on the bottom of OCWD's recharge basins resulting in a decrease in water recharge and an increase in maintenance requirements.

The Proposed Project is based on the success of OCWD's Prado Wetlands, located immediately downstream of the proposed RRTWP, which has been successful in benefiting the OCWD
