**Abstract:** The National Emission Standards for Hazardous Air Pollutants (NESHAP) for the regulations published at 40 CFR part 63, subpart SSSSS were proposed on June 20, 2002, promulgated on April 16, 2003, and most recently amended on November 19, 2021 (86 FR 66045). These regulations apply to each refractory products manufacturing facility which produces refractory bricks, refractory shapes, monolithics, kiln furniture, crucibles, and other materials used as linings for boilers, kilns, and other processing units and equipment where extreme temperature, corrosions, and abrasion would destroy other materials. These regulations apply to existing facilities and new facilities that manufacture refractory products and use organic hazardous air pollutant (HAP), chromium refractory, and clay refractory products. New facilities include those that commenced

construction, modification, or reconstruction after the date of proposal. Revisions to the NESHAP were finalized on November 19, 2021 as a result of the residual risk and technology review (RTR) required under the Clean Air Act (CAA). This information is being collected to assure compliance with 40 CFR part 63, subpart SSSSS.

In general, all NESHAP standards require initial notifications, performance tests, and periodic reports by the owners/operators of the affected facilities. They are also required to maintain records of the occurrence and duration of any startup, shutdown, or malfunction in the operation of an affected facility, or any period during which the monitoring system is inoperative. These notifications, reports, and records are essential in determining compliance, and are required of all affected facilities subject to NESHAP. *Form Numbers:* None.

*Respondents/affected entities:* Refractory products manufacturing facilities.

*Respondent's obligation to respond:* Mandatory (40 CFR part 63, subpart SSSSS).

*Estimated number of respondents:* 3 (total).

*Frequency of response:* Initially and semiannually.

*Total estimated burden:* 341 hours (per year). Burden is defined at 5 CFR 1320.03(b).

*Total estimated cost:* \$134,000 (per year), which includes \$87,000 annualized capital or operation & maintenance costs.

*Changes in the estimates:* There is an increase of 111 hours in the total estimated respondent burden compared with the ICR currently approved by OMB. This increase is due to a correction of the estimated person-hours per occurrence and number of respondents per year for performance tests and reports. These estimates were updated in this ICR renewal based on information provided by industry through consultation as described in section 8 of the supporting statement. Additionally, corrections were made to remove burden and costs associated with notifications and reports of alternative fuel use. The rule does not allow alternative fuel use after November 19, 2021. The overall result is an increase in burden hours and costs. There is an increase in the capital/startup and operation and maintenance (O&M) costs as calculated in section 13 of the supporting statement compared with the costs in the previous ICR. The increase is due to cost increases from updating the CEPCI index to the 2023 index and corrections to the estimated

costs for performance tests. The corrections are based on information provided by industry through consultation as described in section 8 of the supporting statement.
