Fisheries of the Northeastern United States; Atlantic Herring Fishery; Adjustments to 2024 Specifications

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.
ACTION: Temporary final rule; adjustment of specifications.

SUMMARY: In accordance with the regulations implementing the Atlantic Herring Fishery Management Plan, this action adjusts the 2024 harvest specifications for the herring fishery. Specifically, it adjusts catch limits in herring management areas 1A, 1B, and 2 to account for catch overages and an underage in those areas during 2022. This action is necessary to help prevent overfishing and support the harvest of optimum yield consistent with the requirements of the Fishery Management Plan.

DATES: Effective March 4, 2024.
ADDRESSES: Copies of supporting documents, including the 2023–2025 Atlantic Herring Specifications, are available from the Sustainable Fisheries Division, Greater Atlantic Regional Fisheries Office, 55 Great Republic Drive, Gloucester, MA 01930, telephone (978) 281–9315, or online at: <https://www.nefmc.org/management-plans/herring> and <https://www.fisheries.noaa.gov/species/atlantic-herring#management>.

SUPPLEMENTARY INFORMATION:
Background
The Atlantic herring harvest in the United States is managed under the Atlantic Herring Fishery Management Plan (FMP) developed by the New England Fishery Management Council and approved by NMFS. The FMP divides the herring annual catch limit (ACL) among three management areas, one of which has two sub-areas. It divides Area 1 (located in the Gulf of Maine (GOM)) into an inshore section (Area 1A) and an offshore section (Area 1B). Area 2 is located in the coastal waters between Massachusetts and North Carolina, and Area 3 is on Georges Bank (GB). The FMP considers the herring stock complex to be a single stock, but there are inshore (GOM) and offshore (GB) stock components. The GOM and GB stock components segregate during spawning and mix during feeding and migration. Each management area has its own sub-ACL to allow greater control of the fishing mortality on each stock component. NMFS published Amendment 4 to the FMP (76 FR 11373, March 2, 2011) to address ACL and accountability measure (AM) requirements. As a way to account for ACL/sub-ACL overages in the herring fishery, Amendment 4 established an AM that requires NMFS to deduct any ACL/sub-ACL overages from the ACL and corresponding sub-ACL of the year following the catch overage determination. Amendment 4 also specified that NMFS will announce overage deductions in the **Federal Register** prior to the start of the fishing year, if possible. NMFS published Framework Adjustment 2 to the FMP and the 2013–2015 specifications for the herring fishery on October 4, 2013 (78 FR 61828). Among other measures, Framework 2 allowed for the carryover of unharvested catch (*i.e.*, underages) in the year following a fishing year’s catch accounting determination. Provided that annual total catch does not exceed the ACL, up to 10 percent of each sub-ACL may be carried over and added to the following year’s sub-ACL. The carryover provision allows a sub-ACL increase for a management area, but it does not allow a corresponding increase to the ACL. NMFS published Framework Adjustment 9 to the FMP on July 19, 2022 (87 FR 42962). Among other
