Self-Help Homeownership Opportunity Program (SHOP) Eligibility Information

On page 27362 of the May 14, 2004, SuperNOFA under section III.C.2. captioned "Threshold Requirements," HUD corrects section III.C.2.e. to read as follows:

e. Your program must require homebuyers to contribute a minimum of 100 hours of sweat equity toward the construction or rehabilitation of their own homes and/or the homes of other homebuyers participating in the self-help housing program. However, in the case of a household with only one adult, the requirement is 50 hours of sweat equity. This includes training for construction on the dwelling units, but excludes homebuyer counseling and home maintenance training. Reasonable accommodation must be permitted in the provision of sweat equity for persons with disabilities.

On page 27362 of the May 14, 2004, SuperNOFA under section III.C.2 captioned "Threshold Requirements," HUD corrects section III.C.2.f. to read as follows:

f. Your program must involve community participation in which volunteers assist in the construction of dwellings. Volunteer labor is work performed by an individual without promise, expectation or compensation for the work rendered. For mutual self-help housing programs that are assisted by USDA Rural Development under section 523 of the Housing Act of 1949 (7 CFR Part 1944, Subpart I) or which have a program design similar to the section 523 program, the work by each participating family on other participating families' homes may count as volunteer labor. A mutual self-help housing program generally involves 4 to 10 participating families organized in a group to use their own labor to reduce the total construction cost of their homes and complete construction work on their homes by an exchange of labor with one another.

SUPPLEMENTARY INFORMATION: On August 27, 1998, a tanker truck overturned on U.S. Route 460 in Tazewell County, Virginia. The truck released approximately 1,350 gallons of Octocore 554-revised, a rubber accelerant, into an unnamed tributary about 530 feet from its confluence with the Clinch River. The spill turned the river a snowy white color and caused a significant fish kill. The spill also killed most aquatic benthic invertebrates for about 7 miles downstream and destroyed one of the last two known remaining reproducing populations of the endangered tan riffleshell mussel.
