

supplements. REU Site awards fund groups of undergraduates to work with faculty members at an institution. Half of the undergraduates in an REU site must come from other institutions. ENG also makes REU Supplement awards to NSF-funded Engineering Research Centers and to other NSF-funded researchers for comparable involvement of undergraduates.

The proposed study will be similar to the 2003 URO study. It will focus on undergraduate ENG REU participants and the faculty members who are responsible for the ENG REU awards during summer 2006 through spring 2007, and will examine in detail for the first time the activities, outcomes, and impacts of REU awards made in a single NSF directorate—ENG. The study will evaluate the longer-term effects of REU experiences with a follow-up survey of the students approximately two years later. The REU program officers in NSF's Division of Engineering Education and Centers (EEC) particularly want to learn in depth about the EEC REU Site and ERC REU Supplement awards from former REU students and awardees, any differences between the Sites and ERC Supplements, and lessons learned for subsequent proposal review and advising prospective PIs. Information will also be used for ENG Program reporting requirements. The study will examine (1) the role of the REU program in aiding participating undergraduates in a decision to pursue graduate education or careers in engineering; and (2) the relationship between how REU activities are structured and managed and participants' subsequent education and career decisions and actions.

The survey data collection will be done on the World Wide Web.
