This proposed collection expands on topics of interest such as use of alternative devices to access the Internet (cell phones, pagers, other hand-held devices), Internet use at school, and Internet use for job searches.

The data collection will be compiled and presented in a publication featuring an array of household demographic data, with breakouts by family income, age, race/origin, type of head of household, or reference person (e.g., female vs. male), households with or without children, level of educational attainment, and labor force status (employed vs. unemployed).

Geographically, data will be collected by urban/rural/central city on a national level and by state. Regional data will also be obtained.
