NUCLEAR REGULATORY COMMISSION

[Docket No. 50-271]

Entergy Nuclear Vermont Yankee, LLC and Entergy Nuclear Operations, Inc., Vermont Yankee Nuclear Power Station; Final Environmental Assessment and Finding of No Significant Impact Related to the Proposed License Amendment To Increase the Maximum Reactor Power Level

AGENCY: U.S. Nuclear Regulatory Commission (NRC or the Commission).

SUMMARY: The NRC has prepared a final Environmental Assessment as its evaluation of a request by Entergy Nuclear Vermont Yankee, LLC and Entergy Nuclear Operations, Inc. (Entergy or the licensee) for a license amendment to increase the maximum thermal power at Vermont Yankee Nuclear Power Station (VYNPS) from 1593 megawatts-thermal (MWt) to 1912 MWt. This represents a power increase

of approximately 20 percent for VYNPS. As stated in the NRC staff's position paper dated February 8, 1996, on the Boiling-Water Reactor Extended Power Uprate (EPU) Program, the NRC staff will prepare an environmental impact statement if it believes a power uprate will have a significant impact on the human environment. The NRC staff did not identify any significant impact from the information provided in the licensee's EPU application for VYNPS or the NRC staff's independent review; therefore, the NRC staff is documenting its environmental review in an environmental assessment. The final environmental assessment and finding of no significant impact is being published in the **Federal Register**.

The NRC published a draft environmental assessment and finding of no significant impact on the proposed action for public comment in the **Federal Register** on November 9, 2005 (70 FR 68106). Two sets of comments were received as discussed below.

The licensee provided three comments in a letter dated December 8, 2005 (Agencywide Documents Access and Management System (ADAMS) Accession No. ML053500122). The first comment clarified operation of the three modes of operation of the circulating water system. Based on this comment, the NRC revised the description of the system in the "Plant Site and Environs" and "Water Use Impacts" sections of the

final environmental assessment. The second comment clarified that transmission lines are owned and operated by different transmission operators, rather than Entergy as was indicated in the draft environmental assessment. Based on this comment, the NRC revised the "Transmission Facility Impacts" section of the final environmental assessment. The third comment provided information regarding replacement of 21 of the 22 cooling tower fan motors with higher horsepower motors. Since Entergy indicated that the conclusions in the draft environmental assessment regarding cooling tower operation (including noise) were correctly stated, no changes were made based on this comment.

Mr. David L. Deen of the Connecticut River Watershed Council (CRWC) provided three comments in an e-mail dated December 9, 2005 (ADAMS Accession No. ML053500124). The first comment raised concerns that the current National Pollutant Discharge Elimination System (NPDES) permit for VYNPS places no upper bound on the temperature of the river at which the licensee must stop adding waste heat through its cooling tower discharge and that a draft amendment to this permit fails to address this shortcoming. The CRWC proposed that Entergy should not raise the ambient water temperature beyond 85 °F at any point within the
