DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Project No. 6916–011]

City and County of Denver, Colorado; Notice of Availability of Environmental Assessment

In accordance with the National Environmental Policy Act of 1969 and the Federal Energy Regulatory Commission's (Commission) regulations, 18 CFR part 380 (Order No. 486, 52 FR 47897), the Office of Energy Projects has reviewed an application submitted by City and County of Denver, Colorado acting by and through its Board of Water Commissioners (Denver Water), to exempt its Strontia Springs Project No. 6916 from the licensing requirements of Part I of the Federal Power Act. The Strontia Project is located on the South Platte River, in Douglas and Jefferson counties, Colorado. The project occupies federal lands within Pike San Isabel National Forest, administered by the U.S. Forest Service.

An environmental assessment (EA) has been prepared as part of Commission staff's review of the proposal. In the application, Denver Water proposes to upgrade its turbine generator unit, which would increase the total installed capacity of the project to 1.25-megawatts, and to convert its license to an exemption. The EA contains Commission staff's analysis of the probable environmental impacts of the proposed action and concludes that approval of the proposal would not constitute a major federal action significantly affecting the quality of the human environment.

The Commission provides all interested persons an opportunity to view and/or print the EA via the internet through the Commission's Home Page (<http://www.ferc.gov>) using the eLibrary link. Enter the docket number, excluding the last three digits in the docket number field, to access the document. At this time, the Commission has suspended access to Commission's Public Reference Room, due to the proclamation declaring a National Emergency concerning the Novel Coronavirus Disease (COVID–19), issued by the President on March 13, 2020.

k. This application has been accepted for filing and is now ready for environmental analysis.

1. *The Shawmut Project consists of the following constructed facilities:* (1) a 24-foot-high, 1,480-foot-long concrete gravity dam consisting of: (i) A 380-foot-long overflow section with hinged flashboards, (ii) a 730-foot-long overflow section with an inflatable bladder, (iii) 25-foot-wide sluice section; (iv) a non-overflow section; and (v) a headworks containing 11 headgates that regulate flow into a forebay; (2) a 1,310-acre impoundment extending about 12 miles upstream; (3) two powerhouses adjacent to the forebay, separated by a 10-foot-high by 7-foot-wide Tainter gate and a 6-foot-high by 6-foot-wide deep gate; (4) eight turbine-generating units; (5) a 300-foot-long tailrace; (6) 250-foot-long generator leads connecting the powerhouses with a substation; and (7) appurtenant facilities.

Brookfield operates the project in a run-of-river mode and implements specific operating procedure to facilitate upstream and downstream fish passage at the project. Upstream passage for American eel is provided by a dedicated eel passage facility located adjacent to one of the powerhouses. There are no constructed upstream anadromous fishways at the project. Currently anadromous fish are captured and transported upstream of the Shawmut Project via a fish lift and transport system at the Lockwood Dam Hydroelectric Project No. 2574, located about 6 miles downstream. Downstream fish passage for American eel and anadromous fish at the Shawmut Project is provided via a combination of routing flows through the project's spillways, turbines, and downstream fish passage facilities (e.g., deep gate and Tainter gate between the powerhouses).

Brookfield proposes to construct and operate a forebay guidance boom to direct downstream migrating fish to a surface bypass route and minimize passage through the turbines.
