

COVID-19 Cases per 100,000 Persons

The number in column 3 is the percent share of total COVID-19 cases per 100,000 persons for each State. This number is derived by taking the total number of COVID-19 cases per 100,000 persons reported to the Centers for Disease Control, by State, as of 12:15 p.m. on June 2, 2020 and dividing that by the total number of cases per 100,000 persons in the U.S. State data on cases

per 100,000 persons and the sum of all cases per 100,000 persons may be retrieved from the Centers for Disease Control at <https://www.cdc.gov/covid-data-tracker/index.html> by downloading the Excel document that accompanies the visual displays.¹⁸

Ranking Methodology

To determine ranking, States were assigned total burden scores based on sum of the values of the indicators

relative to one another.¹⁹ All three indicators were weighted equally in calculating burden scores. Higher values on the indicators shows higher need for the State (e.g., higher share of COVID-19 cases, higher percentage of households without broadband access, etc.). The States were then ranked based on their total burden scores. Points were then awarded by the percentile of their rank as indicated below.

Percentile	Number of points awarded	State ranks ²⁰
81st to 100th percentile	20	43 through 52.
61st to 80th percentile	16	32 through 42.
41st to 60th percentile	12	22 through 31.
21st to 40th percentile	8	11 through 21.
20th percentile and below	4	1 through 10.
