Part 50 applies to operators of coal, metal, and nonmetal mines. It requires operators to immediately notify MSHA of accidents, investigate accidents and restrict disturbance of accident-related areas. This part also requires operators to file reports with MSHA pertaining to accidents, occupational injuries, and occupational illnesses, as well as employment and coal production data, and requires operators to maintain copies of reports at mine offices. SUPPLEMENTARY INFORMATION: Section 103(h) of the Mine Act, 30 U.S.C. 813, authorizes MSHA to collect information necessary to carry out its duty in protecting the safety and health of miners. It has long been known that inadequate maintenance of electric equipment is a major cause of serious electrical accidents in the coal mining industry. MSHA regulations require the mine operator to establish an electrical maintenance program by specifying minimum requirements for the examination, testing, and maintenance of electric equipment. The regulations also contain recordkeeping requirements that help operators in implementing an effective maintenance program. This ICR requires coal mine operators to frequently exam, test, and properly maintain all electrical equipment and high voltage longwall mining systems and to keep records of the examinations and tests. For additional substantive information about this ICR, see the related notice published in the **Federal Register** on July 24, 2023 (88 FRN 47520).
