

be found in its *Critical Minerals Assessment* published on its website in July 2023.⁴

By this Notice, the Secretary of Energy advises the public of the addition of metallurgical coal to DOE's Critical Material List. The assessment⁵ that forms the justification for including metallurgical coal used in the production of steel on the Critical Material List can be found on DOE's website: <https://www.energy.gov/cmm/what-are-critical-materials-and-critical-minerals>. The assessment concludes that the current U.S. steel market and its reliance on metallurgical coal puts the industry on track for significant import reliance. Meeting the policy goal of U.S. steel dominance will require dramatic increases in domestic metallurgical coal production and use, and thereby supports the determination that coal used for steelmaking is a DOE critical material. Furthermore, this action directly supports the President's policy goals of reinvigorating the U.S. coal industry and achieving American energy dominance as explained in Executive Order 14261, "Reinvigorating America's Beautiful Clean Coal Industry and Amending Executive Order 14241".⁶
