Agency Forms Undergoing Paperwork Reduction Act Review

The Centers for Disease Control and Prevention (CDC) publishes a list of information collection requests under review by the Office of Management and Budget (OMB) in compliance with the Paperwork Reduction Act (44 U.S.C. Chapter 35). To request a copy of these requests, call the CDC Reports Clearance Officer at (404) 639–5960 or send an e-mail to omb@cdc.gov. Send written comments to CDC Desk Officer, Office of Management and Budget, Washington, DC or by fax to (202) 395–6974. Written comments should be received within 30 days of this notice.

Proposed Project

Work Organization Predictors of Depression in Women—Reinstatement—The National Institute for Occupational Safety and Health (NIOSH), Centers for Disease Control and Prevention (CDC).

Background and Brief Description

Depression is a costly and debilitating occupational health problem. Research has indicated that the costs to an organization of treatment for depression can rival those for heart disease, and both major depressive disorder and forms of minor depression have been found to be associated with more disability days than other types of health diagnoses. This may be of particular relevance for working women. Various national and international studies indicate that women in developed countries experience depression at up to twice the rate of men. Studies that have examined this gender difference have focused on social, personality, and genetic explanations while few have explored factors in the workplace that may contribute to the gender differential. Examples of workplace factors that may contribute to depression among women include: additive workplace and home responsibilities, lack of control and authority, and low paying and low status jobs. Additionally, women are much more likely to face various types of discrimination in the workplace than men, ranging from harassment to inequalities in hiring and promotional opportunities, and these types of stressors have been strongly linked with psychological distress and other negative health outcomes. On the positive side, organizations that are judged by their employees to value diversity and employee development engender lower levels of employee stress, and those that enforce policies against discrimination have more

committed employees. Such organizational practices and policies may be beneficial for employee mental health, particularly the mental health of women.

This research focuses on the following questions: (1) Which work organization factors are most predictive of depression in women, and (2) are there measurable work organization factors that confer protection against depression in women employees?

The research uses a repeated measures, prospective design with data collection at three points (baseline and eighteen months follow-ups). A 45-minute survey is being administered by telephone to 314 women and men at 16 different organizations. The survey contains questions about traditional job stressors (e.g., changes in workload, social support, work roles), stressors not traditionally examined, but which may be linked with depressive symptoms among women (e.g., roles and responsibilities outside of the workplace, discrimination, career issues) depression symptoms, and company policies, programs and practices. Analyses will determine which work organization factors are linked with depressive symptoms and what effect the organizational practices/policies of interest have on depression. Findings from this prospective study will also help target future intervention efforts to reduce occupationally-related depression in women workers. There will be no cost to respondents. The estimated annualized burden for this data collection is 236 hours.

ESTIMATED ANNUALIZED BURDEN

Respondents	Number of respondents	Number of responses per respondent	Average burden per response (in hours)
Employees	314	1	45/60

Dated: June 27, 2008.

Proposed Data Collections Submitted for Public Comment and Recommendations

In compliance with the requirement of Section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995 for opportunity for public comment on proposed data collection projects, the Centers for Disease Control and Prevention (CDC) will publish periodic summaries of proposed projects. To request more information on the proposed project or to obtain a copy of data collection plans and instruments, call the CDC Reports Clearance Officer on 404-639-5960 or send comments to CDC Assistant Reports Clearance Officer, 1600 Clifton Road, MS D-74, Atlanta, GA 30333 or send an e-mail to omb@cdc.gov.

Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be

collected; and (d) ways to minimize the burden of the collection of information on respondents, including the use of automated collection techniques or other forms of information technology. Written comments should be received within 60 days of this notice.

Proposed Project

The National Health and Nutrition Examination Survey (NHANES)—(0920-0237)—Revision—National Center for Health Statistics (NCHS), Centers for Disease Control and Prevention (CDC).

Background and Brief Description

Section 306 of the Public Health Service (PHS) Act (42 U.S.C. 242k), as amended, authorizes that the Secretary of Health and Human Services (DHHS), acting through NCHS, shall collect statistics on the extent and nature of illness and disability; environmental, social and other health hazards; and determinants of health of the population of the United States. This three-year clearance request includes the data collection in 2009 and 2010 and data planning and testing activities for 2011–2012 data collection.

The National Health and Nutrition Examination Survey (NHANES) was conducted periodically between 1970 and 1994, and continuously since 1999 by the National Center for Health Statistics, CDC. Almost 19,000 persons are screened, with about 5,000 participants interviewed and examined annually. Participation in NHANES is completely voluntary and confidential.

NHANES programs produce descriptive statistics which measure the health and nutrition status of the general population. Through the use of questionnaires, physical examinations,

and laboratory tests, NHANES studies the relationship between diet, nutrition and health in a representative sample of the United States. NHANES monitors the prevalence of chronic conditions and risk factors related to health such as arthritis, asthma, osteoporosis, infectious diseases, diabetes, high blood pressure, high cholesterol, obesity, smoking, drug and alcohol use, physical activity, environmental exposures, and diet. NHANES data are used to produce national reference data on height, weight, and nutrient levels in the blood. Results from more recent NHANES can be compared to findings reported from previous surveys to monitor changes in the health of the U.S. population over time. NHANES continues to collect genetic material on a national probability sample for future genetic research aimed at understanding disease susceptibility in the U.S. population.

NHANES data users include the U.S. Congress; the World Health Organization; numerous Federal agencies such as the National Institutes of Health, the Environmental Protection Agency, and the United States Department of Agriculture; private groups such as the American Heart Association; schools of public health; private businesses; individual practitioners; and administrators. NHANES data are used to establish, monitor, and/or evaluate recommended dietary allowances, food fortification policies, environmental exposures, immunization guidelines and health education and disease prevention programs. This submission requests approval for three years.

There is no cost to respondents other than their time.

ESTIMATED ANNUALIZED BURDEN HOURS

Type of respondent	Number of respondents	Number of responses per respondent	Average burden per response (in hours)	Total burden hours
1. NHANES respondents	18,813	1	2	37,626
2. Special study/pretest participants	4,000	1	3	12,000
Total	49,626
