

of FMVSS No. 213, "Interface Profile of Tether Hook," specifies numerous dimensional limits for the tether hook, not only the overall tether hook height limit of 20 mm that is the subject of this inconsequential noncompliance application. Importantly, Detail A of Figure 11 specifies dimensional limits for the inside portion of the tether hook that actually attaches to the vehicle tether anchorage. NHTSA believes that adherence to these dimensional limits provides assurance that the tether hook will be able to be properly fastened onto the vehicle anchorage, even if the overall height of the tether hook is up to 0.39 mm greater than the 20 mm allowed in the standard. The tether hooks in question complied with these internal dimensional requirements, and NHTSA does not believe that the minor discrepancy in overall height will result in a safety problem in real-world applications.

In its application, Evenflo stated:

Although Evenflo cannot be certain of the number, we estimate that at least one hundred (100) dynamic sled tests were conducted (using the protocol set forth in FMVSS No. 213) on restraints which likely would have been equipped with tether hooks that did not meet the dimensional requirements of S5.9(b) and Figure 11. In none of these tests did the tether hook malfunction or improperly perform in any manner. Evenflo is confident that the non-compliance has no adverse impact of the dynamic performance of the child restraints.

As noted earlier, NHTSA has determined that the magnitude of the noncompliance is so small that it will not adversely affect a consumer's ability to use (attach/detach) his/her tether. Similarly, and as demonstrated by the lack of test failures observed by Evenflo during dynamic testing conducted using tether hooks that exceed the maximum height requirement, NHTSA does not believe that the additional fraction of a millimeter in overall tether anchorage height will result in any perceptible negative affect on the performance of the child restraint in a crash scenario.

For these reasons, the agency has decided that Evenflo has met its burden of persuasion that the noncompliance at issue is inconsequential to safety and its application is granted. Accordingly, Evenflo is hereby exempted from the notification and remedy provisions of 49 U.S.C. 30118 and 30120.
