The applicant proposes to address a variety of questions regarding population size, habitat use, and behavior of baleen and odontocete species using passive acoustic monitoring, suction cup tagging, biopsy sampling, underwater photography/videography, and photo ID during vessel surveys in Hawaii and the Mariana Islands (Guam and the Commonwealth of the Northern Mariana Islands). The research would target humpback whales as well as 25 other species of whales and dolphins. Species may undergo all methodologies (except right whales, which will not be tagged). Incidental harassment for all species is also requested. Research would take place throughout the year. The permit is requested for 5 years.

In compliance with the National Environmental Policy Act of 1969 (42 U.S.C. 4321 *et seq.*), an initial determination has been made that the activity proposed is categorically excluded from the requirement to prepare an environmental assessment or environmental impact statement.

The product of the Data/Assessment Workshop is a report which compiles and evaluates potential datasets and recommends which datasets are appropriate for assessment analyses, and describes the fisheries, evaluates the status of the stock, estimates biological benchmarks, projects future population conditions, and recommends research and monitoring needs. Participants for SEDAR Workshops are appointed by the Gulf of Mexico, South Atlantic, and Caribbean Fishery Management Councils and NOAA Fisheries Southeast Regional Office, HMS Management Division, and Southeast Fisheries Science Center.
