

generated and retrievably-stored waste and the WIPP Waste Acceptance Criteria was revised accordingly. Also, when characterizing these two categories of wastes, the same EPA-approved TRU waste characterization processes and procedures are used to characterize physical and radiological contents of each waste container, and, thus, there is no technical basis to maintain this distinction.

Pursuant to the 2004 rulemaking changes to 40 CFR 194.8 for all waste, the EPA required characterization of newly-generated waste as a T1 change under AK at all sites where its characterization was not demonstrated as part of the baseline inspections. The 2013 NMED WIPP hazardous waste permit changes discussed above negated this distinction. Therefore, to be consistent with the revised NMED hazardous waste permit and the DOE's revised WIPP Waste Acceptance Criteria, the EPA intends to no longer distinguish, in its waste characterization program inspection, review and evaluation activities, between newly-generated and retrievably-stored waste. Accordingly, the EPA is proposing to remove from the site-specific tiering tables the Acceptable Knowledge T1 change requirement for newly-generated waste at all sites characterizing TRU waste. This proposed action would streamline the need for the DOE to submit duplicative TRU waste approval requests and for subsequent duplicative EPA evaluation and approvals. The EPA seeks comment on this proposed action. After evaluating public comments, if the EPA concludes that there are no unresolved issues, the Agency will issue a letter authorizing the DOE to eliminate the distinction between retrievably-stored and newly-generated TRU waste. The Agency will also revise site-specific tiering tables as necessary to remove the existing Tier 1 change requirement for newly-generated TRU waste when issuing the next site-specific waste characterization program approval, as well as file all official documentation in its public docket (as described in Section IV in this preamble).
