**I. Funding Opportunity Description**

*Purpose of Program:* The Financial Education for College Access and Success program is authorized under the Fund for the Improvement of Education Program (FIE), title V, part D, subpart 1, sections 5411 through 5413 of the Elementary and Secondary Education Act of 1965, as amended (ESEA) (20 U.S.C. 7243-7243b). FIE supports nationally significant programs to improve the quality of elementary and secondary education at the State and local levels and help all children meet challenging State academic content and student academic achievement standards. Through the Financial Education for College Access and Success Program, we will support State-led efforts to develop, implement, and evaluate the effectiveness of personal finance instructional materials and corresponding teacher training, with the express purpose of providing high school students with knowledge and skills to make sound financial aid and other personal finance decisions, particularly in relation to obtaining access to, persisting in, and completing postsecondary education.

*Background:* President Barack Obama, in his February 24, 2009 address to a Joint Session of Congress, asked every American to commit to at least one year or more of higher education or career training, in a community college, in a four-year postsecondary institution, through career and technical education courses, or in an apprenticeship. President Obama stated that "This country needs and values the talents of every American", and set a new goal that by 2020, the United States of America would once again have the highest proportion of college graduates in the world.

One of the barriers to achieving this goal is the lack of financial literacy in America, especially among youth. Studies indicate that many Americans do not have the skills they need to make sound financial decisions, including decisions about postsecondary education, for themselves or their families. For example—

(1) Debt literacy—an understanding of how borrowing money works and the ability to perform related calculations—is low across age groups, and this has been found to correlate with making unfavorable borrowing choices;<sup>1</sup>
