**SUPPLEMENTARY INFORMATION:** The subject amendment to Permit No. 881-1745, issued on May 10, 2005 (70 FR 28910), is requested under the authority of the Marine Mammal Protection Act of 1972, as amended (16 U.S.C. 1361 *et seq.*), and the regulations governing the taking and importing of marine mammals (50 CFR part 216).

Permit No. 881-1758 authorizes the permit holder to study growth, development, and health of harbor seals (*Phoca vitulina*) in the ASLC Rehabilitation Program. In addition to conducting standard rehabilitation practices, researchers collect blood, fecal, and urine samples; collect body composition measurements using bioelectrical impedance and deuterium oxide, sodium bromide, Evan's blue dye, and nitrogen administration followed by post-administration blood samples; conduct assimilation efficiency experiments to study metabolic development; and collect blubber biopsies to study fatty acid composition and contaminant loads. The permit expires on May 31, 2010.

The permit holder requests authorization to add ringed (*Phoca hispida*), spotted (*Phoca largha*), ribbon (*Phoca fasciata*), and bearded (*Erignathus barbatus*) seals undergoing rehabilitation at the ASLC to the permit for the same studies currently permitted on harbor seals. Up to 25 individuals of each species requested may have the above procedures performed through the duration of the permit. The applicant also proposes changes to protocols including removing bioelectrical impedance measurements and adding blubber ultrasound measurements for body condition assessment; and adding resting metabolic measurements to aid in the understanding of metabolic changes associated with health, growth, and dietary transitions.

Concurrent with the publication of this notice in the **Federal Register**, NMFS is forwarding copies of this application to the Marine Mammal Commission and its Committee of Scientific Advisors.
