

(ii) A statement from the satellite operator that it has coordinated the operation of the subject non-conforming earth station accessing its satellite(s), including its required downlink power density based on the information contained in the application, with all adjacent satellite networks within 6° of orbital separation from its satellite(s), and the operations will operate in conformance with existing coordination agreement for its satellite(s) with other satellite systems, except as set forth in paragraph (d)(4) of this section.

(iii) A statement from the satellite operator that it will include the subject non-conforming earth station operations in all future satellite network coordinations, and

(iv) A statement from the earth station applicant certifying that it will comply with all coordination agreements reached by the satellite operator(s).

(2) A license granted pursuant to paragraph (d)(1) of this section will include, as a condition on that license, that if a good faith agreement cannot be reached between the satellite operator and the operator of a future 2° compliant satellite, the earth station operator shall accept the power density levels that would accommodate the 2° compliant satellite.

(3) In the event that a coordination agreement discussed in paragraph (d)(1)(ii) of this section is reached, but that coordination agreement does not address protection from interference for the earth station, that earth station will be protected from interference to the same extent that an earth station that meets the requirements of § 25.209 of this title would be protected from interference.

(4) Notwithstanding paragraph (d)(1)(ii) of this section, a party applying for an earth station license pursuant to this section will not be required to certify that its target satellite operator has reached a coordination agreement with another satellite operator whose satellite is within 6° of orbital separation from its satellite in cases where the off-axis EIRP density level of the proposed earth station operations will be less than or equal to the levels specified by the applicable off-axis EIRP envelope set forth in § 25.218 of this chapter in the direction of the part of the geostationary orbit arc within 1° of the nominal orbit location of the adjacent satellite.

Defense Federal Acquisition Regulation Supplement; Reports of Government Property (DFARS Case 2005–D015)

AGENCY: Defense Acquisition Regulations System, Department of Defense (DoD).

ACTION: Final rule.

SUMMARY: DoD has adopted as final, with changes, an interim rule amending the Defense Federal Acquisition Regulation Supplement (DFARS) to update requirements for reporting of Government property in the possession of DoD contractors. The rule replaces DD Form 1662 reporting requirements with requirements for DoD contractors to electronically submit, to the Item Unique Identification (IUID) Registry, the IUID data applicable to the Government property in the contractor’s possession.

DATES: *Effective Date:* November 24, 2008.

FOR FURTHER INFORMATION CONTACT: Mr. Michael Benavides, Defense Acquisition Regulations System, OUSD (AT&L) DPAP (DARS), IMD 3D139, 3062 Defense Pentagon, Washington, DC 20301–3062. Telephone 703–602–1302; facsimile 703–602–7887. Please cite DFARS Case 2005–D015.

SUPPLEMENTARY INFORMATION:

A. Background

DoD published an interim rule at 72 FR 52293 on September 13, 2007, to require reporting of DoD property in the possession of contractors through use of the DoD IUID Registry. Three sources submitted comments on the interim rule. A discussion of the comments is provided below.

1. Marking Requirements

a. *Comment:* Concerning the clause at DFARS 252.211–7007 and the requirement to create a unique item identifier (UII) for certain Government property, physically mark it, and load the required data into the IUID Registry when an item is shipped: There needs to be a notification mechanism on shipping paperwork to identify an item in a given shipment that is IUID compliant. Without some type of information on the documentation indicating that a UII is present, the physical mark could be overlooked and the receiver might create a new UII using its data elements and load the item into the Registry, causing multiple entries for a single item. Under the interim rule, the physical mark is the only indicator to a receiver that a UII is present and must be read to obtain the number for look-up in the Registry. This would seem to be inadequate.

DoD Response: To avoid any confusion, the marking requirement has been excluded from the final rule. Therefore, the recommended notification mechanism is unnecessary.

b. *Comment:* The interim rule imposes a requirement on contractors to
