

Reinterviews would require an additional 1,253 burden hours in FY 2003.

II. Method of Collection

The SIPP is designed as a continuing series of national panels of interviewed households that are introduced every few years with each panel having durations of one to four years. All household members 15 years old or over are interviewed using regular proxy-respondent rules. During the 2001 Panel, respondents are interviewed a total of nine times (nine waves) at 4-month intervals making the SIPP a longitudinal survey. Sample people (all household members present at the time of the first interview) who move within the country and reasonably close to a SIPP primary sampling unit will be followed and interviewed at their new address. Individuals 15 years old or over who enter the household after Wave 1 will be interviewed; however, if these individuals move, they are not followed unless they happen to move along with a Wave 1 sample individual.
