

in the Generic Environmental Impact Statement for License Renewal, Supplement 24 regarding Nine Mile Point Nuclear Station, Units 1 and 2.

After weighing the environmental, economic, technical and other benefits of the facility against environmental costs and considering available alternatives, the Commission found that the adverse environmental impacts of license renewal are not so great that preserving the option of license renewal would be unreasonable. The Commission also has taken all practicable measures within its jurisdiction to avoid or minimize environmental harm in its decision to renew Operating License Nos. DPR-63 and NPF-69. No license conditions are imposed in connection with mitigation measures.

NMP, Units 1 and 2, are located on approximately 900 acres along the shore of Lake Ontario, Oswego County, New York. The site is approximately 5 miles north-northeast of the nearest boundary of the City of Oswego. The licensee's application for the renewed licenses complied with the standards and requirements of the Atomic Energy Act of 1954, as amended (the Act), and the Commission's regulations. As required by the Act and the Commission's regulations in 10 CFR Chapter I, the Commission has made appropriate findings, which are set forth in each license.

Prior public notice of the action involving the proposed issuance of the renewed licenses and of an opportunity for a hearing regarding the proposed issuance of the renewed licenses was published in the **Federal Register** on July 21, 2004 (69 FR 43633).
