Any person desiring to protest this filing must file in accordance with Rule 211 of the Commission's Rules of Practice and Procedure (18 CFR 385.211). Protests to this filing will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Such protests must be filed on or before 5 p.m. Eastern time on the specified comment date. Anyone filing a protest must serve a copy of that document on all the parties to the proceeding.

The Commission encourages electronic submission of protests in lieu of paper using the "eFiling" link at <http://www.ferc.gov>. Persons unable to file electronically should submit an original and 14 copies of the protest to the Federal Energy Regulatory Commission, 888 First Street, NE., Washington, DC 20426.

This filing is accessible on-line at <http://www.ferc.gov>, using the "eLibrary" link and is available for review in the Commission's Public Reference Room in Washington, DC. There is an "eSubscription" link on the Web site that enables subscribers to receive e-mail notification when a

document is added to a subscribed docket(s). For assistance with any FERC Online service, please e-mail FERCOnlineSupport@ferc.gov, or call (866) 208-3676 (toll free). For TTY, call (202) 502-8659.

An Approach to Using Toxicogenomic Data in U.S. EPA Human Health Risk Assessments: A Dibutyl Phthalate Case Study

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice of availability.

SUMMARY: EPA is announcing the availability of a final report titled, "An Approach to Using Toxicogenomic Data in U.S. EPA Human Health Risk Assessments: A Dibutyl Phthalate Case Study" (EPA/600/R-09/028F), which was prepared by the National Center for Environmental Assessment (NCEA) within EPA's Office of Research and Development (ORD).

Toxicogenomics is the application of genomic technologies (*e.g.*, transcriptomics, genome sequence analysis) to study effects of environmental chemicals on human health and the environment. Currently, EPA provides no guidance for evaluating and incorporating genomic data into risk assessment. This report describes an approach to evaluate toxicogenomic data for use in risk assessment and a case study for dibutyl phthalate (DBP). A multidisciplinary team of scientists developed the approach and performed the case study. In this approach, the genomic data and the human outcome and/or toxicity data are considered together to determine the relationship between genomic changes and toxicity or health outcomes and inform mechanisms and modes of toxicity. The DBP case study focuses on male reproductive developmental effects and the use of genomic data in qualitative aspects of the risk assessment because of the type of genomic data available for DBP. It is important to note that the case study presented in this report is a separate activity from any of the ongoing IRIS human health assessments for the phthalates.

The final report includes the development of exploratory methods for analyzing genomic data for application to risk assessment and some preliminary results. In addition, recommendations for risk assessors, research needs, and future directions for generating and applying genomic data in risk assessment are described. The approach and case study may be used as a template for evaluating and analyzing genomic data in future chemical assessments and the methods and research needs may be used by researchers performing genomic studies for use in risk assessment.

ADDRESSES: The document will be available electronically through the NCEA Web site at www.epa.gov/ncea.
