producer, food manufacturer, or
pesticide manufacturer. Potentially
affected entities may include, but are
not limited to:

- Crop production (NAICS code 111).

- Animal production (NAICS code
112).

B. What Should I Consider as I Prepare My Comments for EPA?

1. **Submitting CBI.** Do not submit this
information to EPA through
regulations.gov or e-mail. Clearly mark
the part or all of the information that
you claim to be CBI. For CBI
information in a disk or CD ROM that
you mail to EPA, mark the outside of the
disk or CD ROM as CBI and then
identify electronically within the disk or
CD ROM the specific information that is
claimed as CBI. In addition to one
complete version of the comment that
includes information claimed as CBI, a
copy of the comment that does not
contain the information claimed as CBI
must be submitted for inclusion in the
public docket. Information so marked
will not be disclosed except in
accordance with procedures set forth in
40 CFR part 2.

2. **Tips for preparing your comments.**
When submitting comments, remember
to:

- Identify the document by docket ID
number and other identifying
information (subject heading, **Federal
Register** date and page number).
- Follow directions. The Agency may
ask you to respond to specific questions
or organize comments by referencing a
Code of Federal Regulations (CFR) part
or section number.
- Explain why you agree or disagree;
suggest alternatives and substitute
language for your requested changes.
- Describe any assumptions and
provide any technical information and/
or data that you used.

- If you estimate potential costs or
burdens, explain how you arrived at
your estimate in sufficient detail to
allow for it to be reproduced.

- Provide specific examples to
illustrate your concerns and suggest
alternatives.

vii. Explain your views as clearly as possible, avoiding the use of profanity or personal threats.

viii. Make sure to submit your comments by the comment period deadline identified.

II. What Action is the Agency Taking?

EPA is printing a summary of a pesticide petition received under section 408 of the Federal Food, Drug, and Cosmetic Act (FFDCA), 21 U.S.C. 346a, proposing the establishment of regulations in 40 CFR 180.409 for residues of pirimiphos-methyl in or on sunflower seeds. EPA has determined that this pesticide petition contains data or information regarding the elements set forth in FFDCA section 408(d)(2); however, EPA has not fully evaluated the sufficiency of the submitted data at this time or whether the data support granting of the pesticide petition. Additional data may be needed before EPA rules on this pesticide petition.

Pursuant to 40 CFR 180.7(f), a summary of the petition included in this notice, prepared by the petitioner along with a description of the analytical method available for the detection and measurement of the pesticide chemical residues is available on EPA's Electronic Docket at <http://www.regulations.gov>. To locate this information on the home page of EPA's Electronic Docket, select "Quick Search" and type the OPP docket ID number. Once the search has located the docket, clicking on the "Docket ID" will bring up a list of all documents in the docket for the pesticide including the petition summary.

New Tolerance

PP 6E7056. Interregional Research Project Number 4 (IR-4), 681 Highway 1 South, North Brunswick, NJ 08902-3390, proposes to establish a tolerance for residues of the insecticide pirimiphos-methyl in or on sunflower seeds at 10 parts per million (ppm). The samples were analyzed using the working method titled "Pirimiphos-Methyl: Magnitude of the Residue on Sunflower", a method very similar to the reference method, "Determination of Residues of Pirimiphos-methyl and its Phosphorus-containing metabolites in Crops, Water and Animal Tissues. Residue Analytical Method No. 11A, ICI Plant Protection Limited." No analysis of metabolites was conducted.

Sunflower seeds are blended with 20% acetone/hexane, filtered, and then partitioned with hexane/acetonitrile to remove the oil. Sunflower oil samples are dissolved in hexane and partitioned with hexane/acetonitrile to remove the oil. The combined acetonitrile layers are

concentrated prior to cleanup. Processed meal samples are homogenized with 20% acetone/hexane, filtered, and then concentrated. Oil is removed via a hexane/acetonitrile partition. Samples from all matrices are then cleaned up by a Florisil cleanup procedure. All samples are analyzed for pirimiphos-methyl using a Hewlett-Packard 5890 gas chromatograph with a flame photometric (FPD) operated in the phosphorus mode (526 nm filter).

Method suitability was evaluated both prior to sample analysis and concurrently with sample analysis. The method was validated prior to sample analysis using commercially obtained dried sunflower root. The method validation recoveries ranged from 81 to 92% in seeds, 85 to 106% in meal, and 80 to 93% in oil. Concurrent recoveries obtained during sample analysis ranged from 85 to 106% in seeds, 78 to 92% in meal, and 86 to 94% in oil.
