SUPPLEMENTARY INFORMATION:

I. Abstract

The United States Patent and Trademark Office (USPTO) uses Public Key Infrastructure (PKI) technology to support electronic commerce between the USPTO and its customers. PKI is a set of hardware, software, policies, and procedures that provide important security services for the electronic business activities of the USPTO, including protecting the confidentiality of unpublished patent applications in accordance with 35 U.S.C. 122 and 37 CFR 1.14, as well as protecting international patent applications in accordance with Article 30 of the Patent Cooperation Treaty.

In order to provide the necessary security for its electronic commerce systems, the USPTO uses PKI technology to protect the integrity and confidentiality of information submitted to the USPTO. PKI employs public and private encryption keys to authenticate the customer's identity and support secure electronic communication between the customer and the USPTO. Customers may submit a request to the USPTO for a digital certificate, which enables the customer to create the encryption keys necessary for electronic identity verification and secure transactions with the USPTO. This digital certificate is required in order to access secure online systems that are provided by the USPTO for transactions such as electronic filing of patent applications and viewing confidential information about unpublished patent applications.

This information collection includes the Certificate Action Form (PTO-2042), which is used by the public to request a new digital certificate, the revocation of a current certificate, or the recovery of a lost or corrupted certificate. Customers may also change the name listed on the certificate or associate the certificate with one or more Customer Numbers. A certificate request must include a notarized signature in order to verify the identity of the applicant. The Certificate Action Form has an accompanying subscriber agreement to ensure that customers understand their obligations regarding the use of the digital certificates and cryptographic software. When generating a new certificate, customers register to get a set of seven codes that will enable customers to recover a lost certificate online without having to contact USPTO support staff.

II. Method of Collection

The Certificate Action Form must be notarized and may be mailed or hand delivered to the USPTO.
