#### **I. Background**

In the past 40 years, the cosmetics industry, as well as consumer behaviors and expectations related to cosmetics, have evolved. Technological and scientific advances have been made in cosmetics production, manufacturing, marketing, and usage, while consumer access to information about cosmetic products and ingredients has expanded, because of the internet and social media influences. Most notably, multiple cosmetic products such as lotions, perfume, body wash, hand wash, shampoo, deodorant, hair spray, baby wipes, nail polish, etc. are used daily by nearly everyone in the United States, including infants, children, adults, geriatric populations, healthy people, and individuals with medical conditions.

Evidence indicates that the prevalence of allergies in the U.S. population is increasing (Ref. 1). However, no publicly available data has been collected on the prevalence of adverse reactions to cosmetic products since 1975 (Ref. 2). FDA proposes a pilot study to collect the data needed for a current and detailed understanding of the impact of allergens on consumer use of cosmetics. In addition to updating our knowledge about cosmetics, this new information collection is consistent with FDA's efforts to improve public awareness of adverse events associated with FDA-regulated products. In December 2016, FDA decided to make public the adverse event data in the Center for Food Safety and Applied
