

Federal-aid bridges rehabilitated in 2007.

- Federal-aid Highways: Construction Materials for New, Replaced and Rehabilitated Bridges 2008, which combines the 2008 reports on new, replaced and rehabilitated Federal-aid bridges.

- Federal-aid Highways: Construction Materials for New, Replaced and Rehabilitated Bridges 2007, which combines the 2007 reports on new, replaced and rehabilitated Federal-aid bridges.

- Non-Federal-aid Highways: Construction Materials for New, Replaced and Rehabilitated Bridges 2008, which combines the 2008 reports on new, replaced and rehabilitated non-Federal-aid bridges.

- Non-Federal-aid Highways: Construction Materials for New, Replaced and Rehabilitated Bridges 2007, which combines the 2007 reports on new, replaced and rehabilitated non-Federal-aid bridges.

The tables provide data for 2 years: 2007 and 2008. The 2007 data is considered complete for new, replaced and rehabilitated bridges, with a minimal likelihood of upward changes in the totals. The 2008 data is considered partially complete for new bridges and complete for rehabilitated bridges, because many new bridges built in 2008 will not appear in the NBI until they are placed into service the following year. Therefore, next year's report will include 2008's data on new bridge construction, because the data will be complete.

Each table displays simple counts of bridges and total bridge deck area. Total bridge deck area is measured in square meters, by multiplying the bridge length by the deck width out-to-out. Culverts under fill are included in the counts but not in the areas because a roadway width is not collected. The data is categorized by the following material types, which are identified in the NBI: steel, concrete, pre-stressed concrete, and other. The category "other" includes wood, timber, masonry, aluminum, wrought iron, cast iron, and other. Material type is the predominate type for the main span(s).
