

and test the wind system against pre-determined parameters in an on-site wind tunnel. The second element of the Competition is the creation and presentation of a market research-supported business plan that will be used to develop the team's technical product into a marketable wind power system. This plan will be presented formally to a panel of judges and informally pitched to a public audience. The final element of the Competition aims to familiarize students with the siting, permitting, and planning process associated with deployment of wind power systems by requiring students to identify a project site for their power system, develop a plan to install their system informed by siting constraints and expected challenges at that location, and present their well-researched deployment strategy. The plan for deployment shall be presented in a slide show or poster.

Each Competition element will be evaluated against a set of pre-weighted objective and subjective criteria in both closed-door and public settings. Technical design and business plan presentations to judge panels will be closed-door and non-public. Teams' market pitch and deployment strategy presentations will be public and attended by judges and other Competition teams. Criteria and weighting will be defined in the 2016 Rules and Requirements document, which will be published in the spring of 2015. Refer to the 2014 Rules and Requirements for examples of likely content.

All dates are subject to change. For more details please visit wind.energy.gov/windcompetition.
